

ICT Innovation – Spring 2018
MSc in Computer Science and MEng Telecom. Engineering
EIT Masters ITA, S&P, VCC
MA in Management of Innovation

Lecture 09 – Product Architecture
Prof. Fabio Massacci

Product Development Process

- Product architecture is determined early in the development process
- Detailed design is important for manufacturing

Product Architecture: Definition

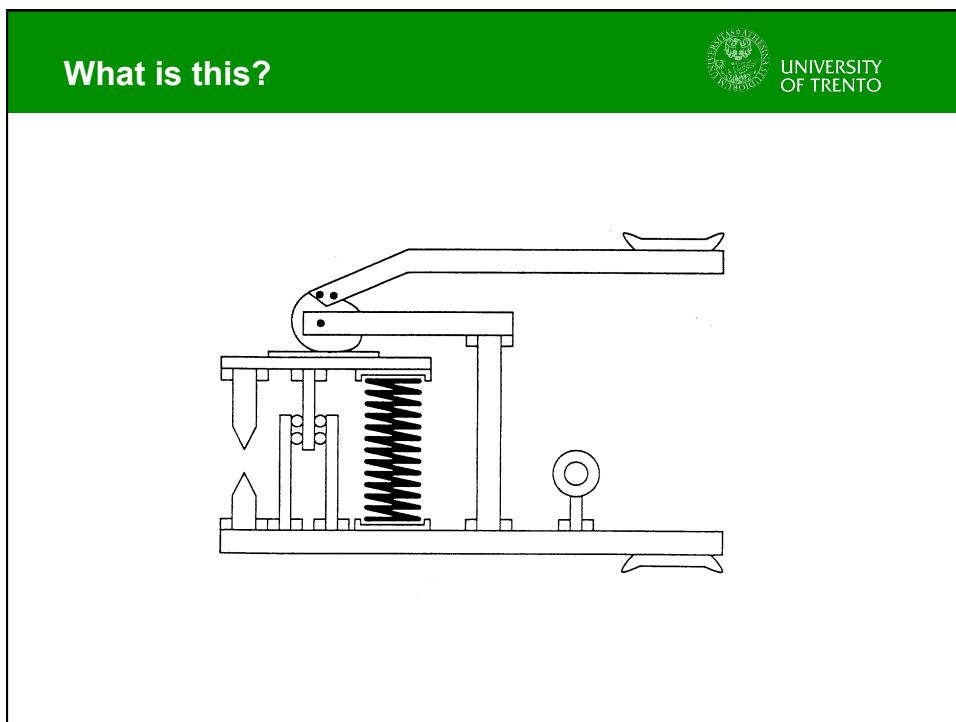

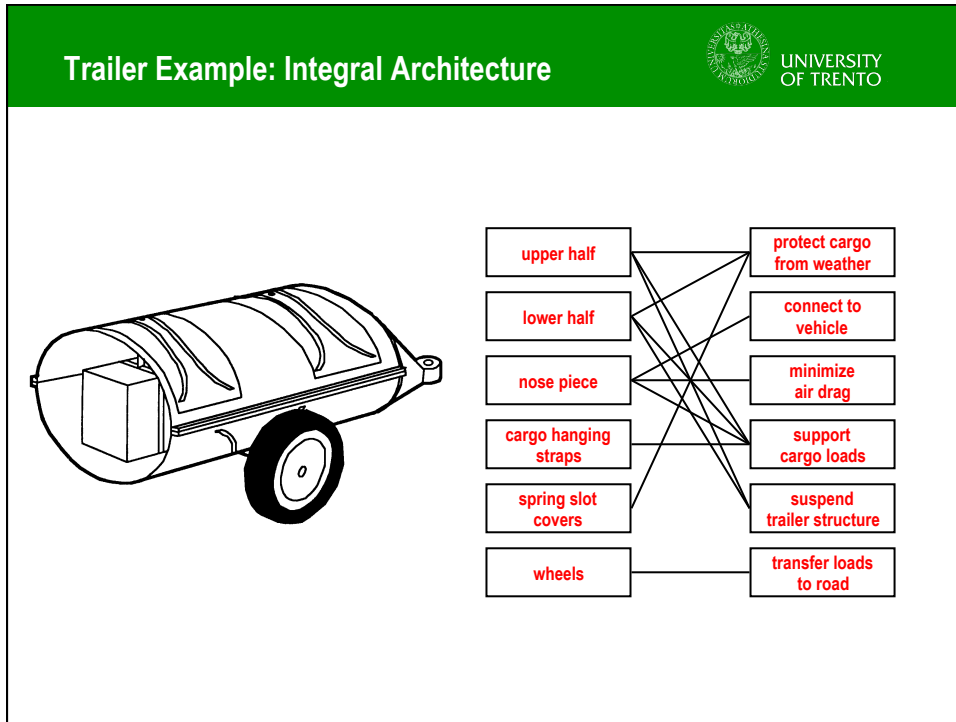

- The arrangement of functional elements into physical chunks which become the building blocks for the product or family of products.

Trailer Example: Modular Architecture

Nail Clippers?

Modular Product Architectures

- **Implementation**
 - Chunks implement one or a few functions entirely.
 - Interactions between chunks are well defined.
- **Efficient?**
 - Simplicity of design
 - Reusability for a product family or platform.
- **Robust to asymmetric wear and tear of components**
 - Only stressed components must be made of high quality material (or can be replaceable)

Swiss Army Knife

Sony Walkman

Platform Architecture of the Sony Walkman

Integral Product Architectures

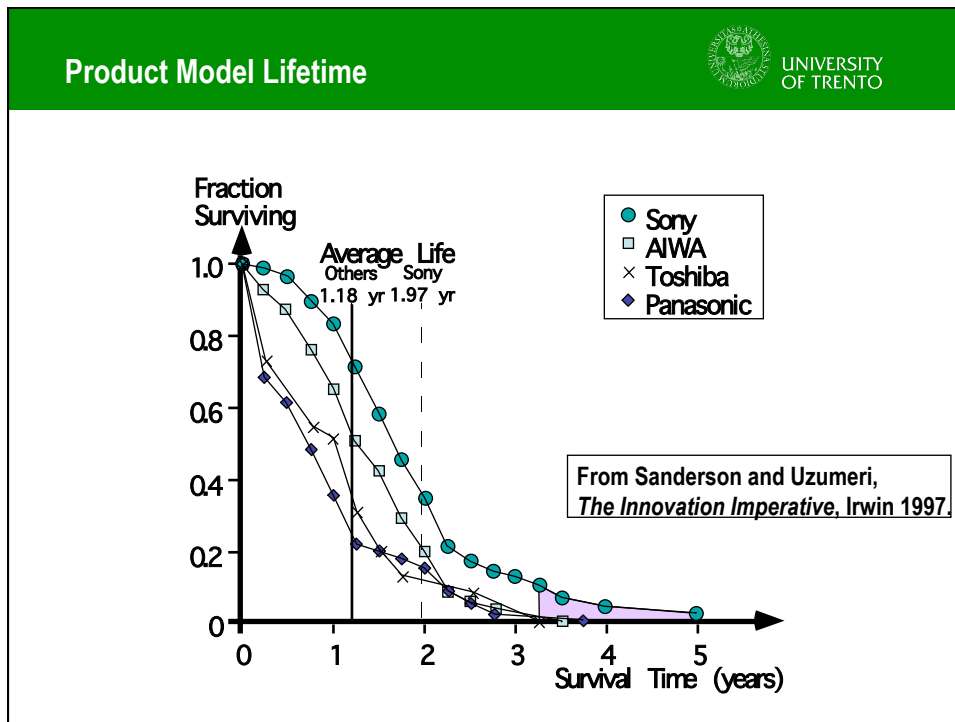

- **Implementation**
 - Functional elements are implemented by multiple chunks,
 - A chunk may implement many functions
 - Interactions between chunks are poorly defined.
- **Efficient?**
 - reduces costs → make one part instead of two and assembling them
 - Harder to design
 - Performance may increase
- **Fragile to asymmetric wear and tear of components**
 - If some part of frame wears out → must replace whole wheel

High-Performance Wheels

Compact Camera

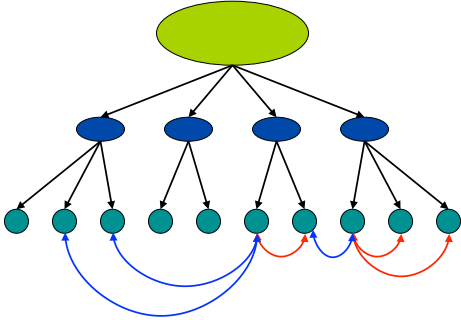

- ### Choosing the Product Architecture
- **Architecture decisions relate to product planning and concept development decisions:**
 - Product Change (copier toner, camera lenses)
 - Product Variety (computers, automobiles)
 - Standardization (motors, bearings, fasteners)
 - Performance (racing bikes, fighter planes)
 - Manufacturing Cost (disk drives, razors)
 - Project Management (team capacity, skills)
 - System Engineering (decomposition, integration)

The concepts of integral and modular apply at several levels:

 UNIVERSITY OF TRENTO

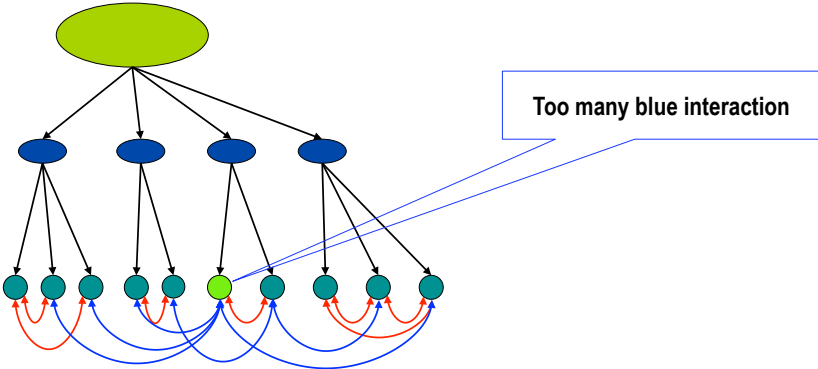

- **Decomposition**
 - system
 - sub-system
 - Component
- **Interaction**
 - within chunks 
 - across chunks 

Product Architecture = Decomposition + Interactions

 UNIVERSITY OF TRENTO

- **Interaction across chunks increases fragility**
 - Cannot be tested before assembly
 - Requires higher precision of assembly or robustness of components

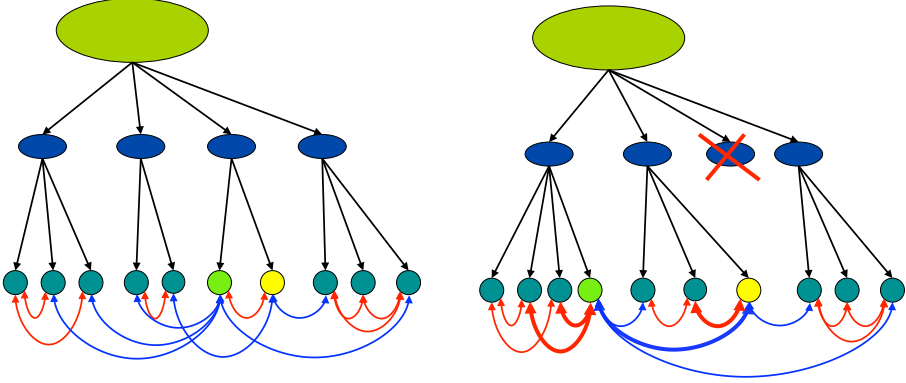

Product Architecture = Decomposition + Interactions

UNIVERSITY OF TRENTO

- **Interaction across chunks increases fragility**
 - Cannot be tested before assembly
 - Requires higher precision of assembly or robustness of components

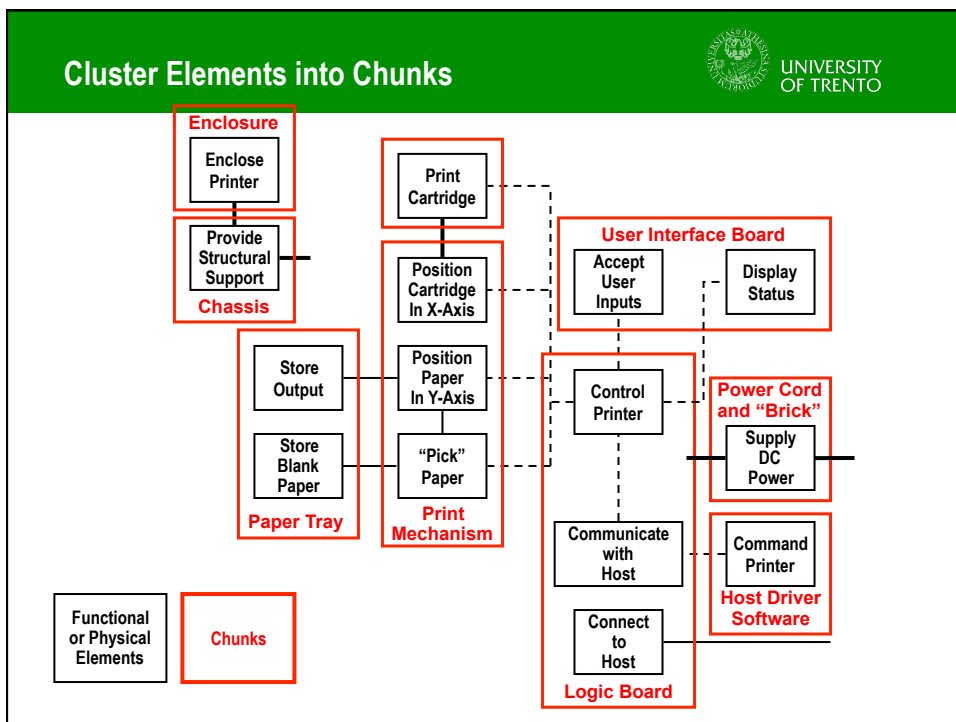

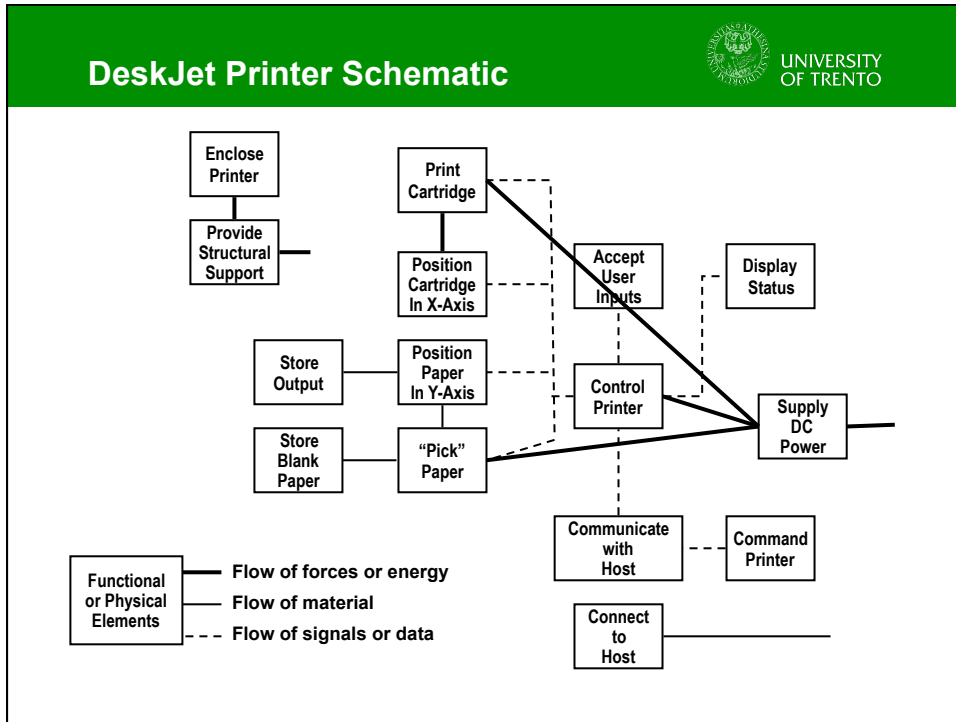

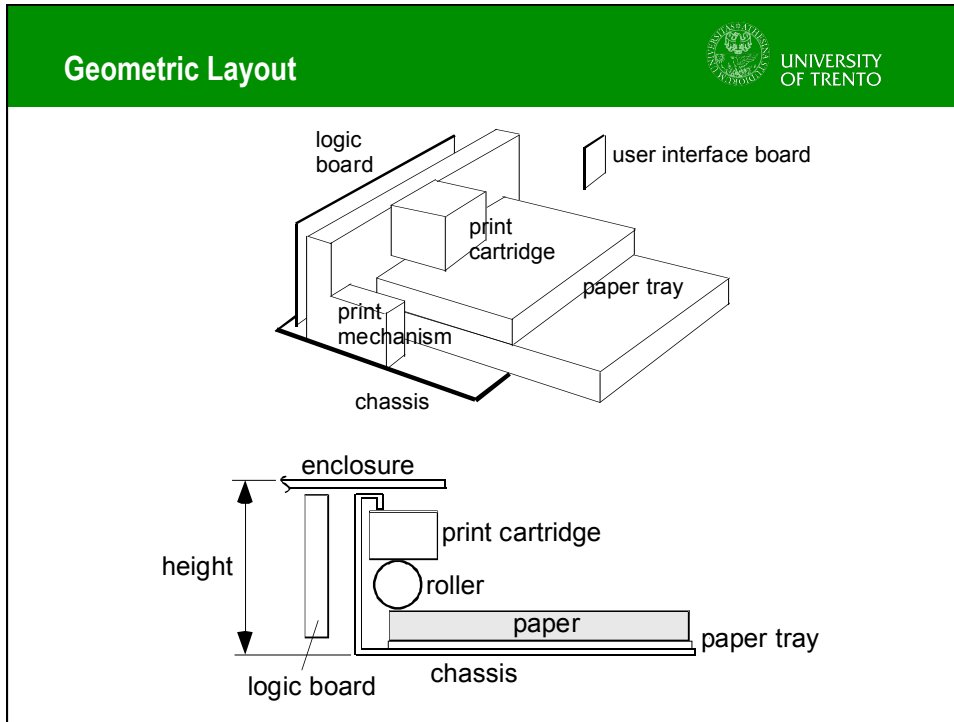

Establishing the Architecture

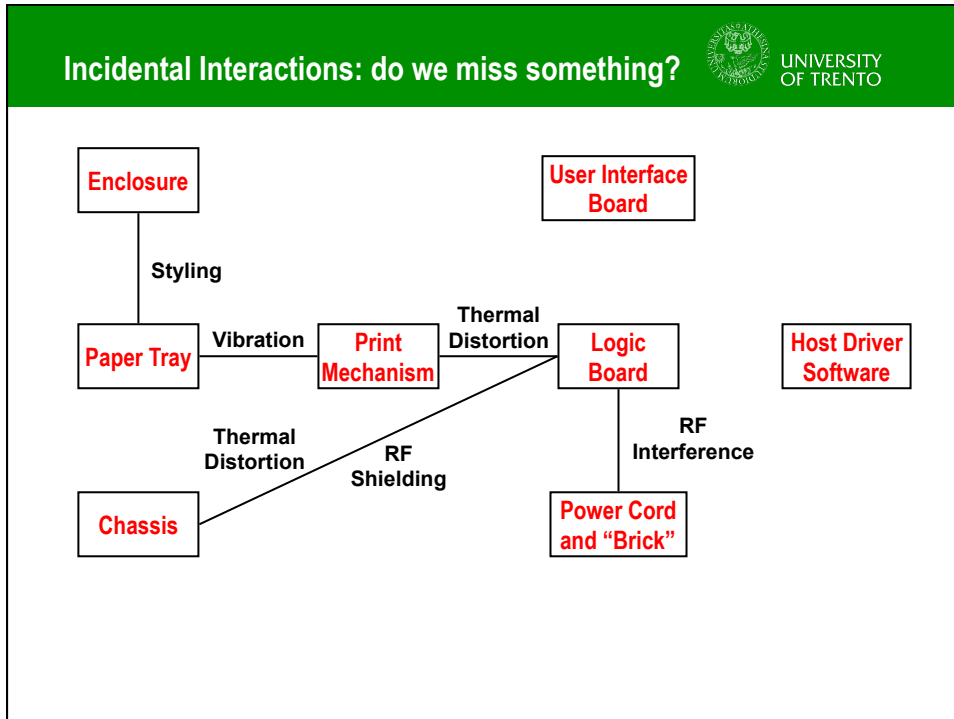

UNIVERSITY OF TRENTO

- **To establish a modular architecture,**
 - create a schematic of the product,
 - cluster the elements of the schematic to achieve the types of product variety desired

Alternative Solutions

- **Power transformer is an example of a functional brick**
 - Must be certified to be free from safety hazard
 - Limits for AC current 0.7mA, DC current 2mA (after 3.5mA muscle contracts and cannot let go)
- **Inside**
 - Pro: only cable outside,
 - Con: whole certified to avoid electric hazards
 - Con: insulation coating must be cooled
- **Outside**
 - Con: more things to carry
 - Pro: only brick certified against alternate current electric hazard
 - Pro: Insulation coating can use environment itself for cooling

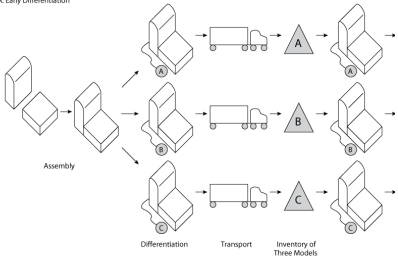

From Product Design and Development by Karl Ulrich and Steven Eppinger (McGraw-Hill/Irwin)

UNIVERSITY OF TRENTO

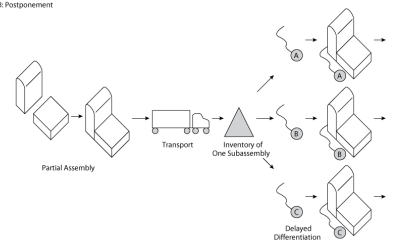

Fundamental Decisions

- **Integral vs. modular architecture?**
- **What type of modularity?**
- **How to assign functions to chunks?**
- **How do we produce and assembly chunks?**
- **How many different products do we want?**

Scenario A: Early Differentiation

Scenario B: Postponement

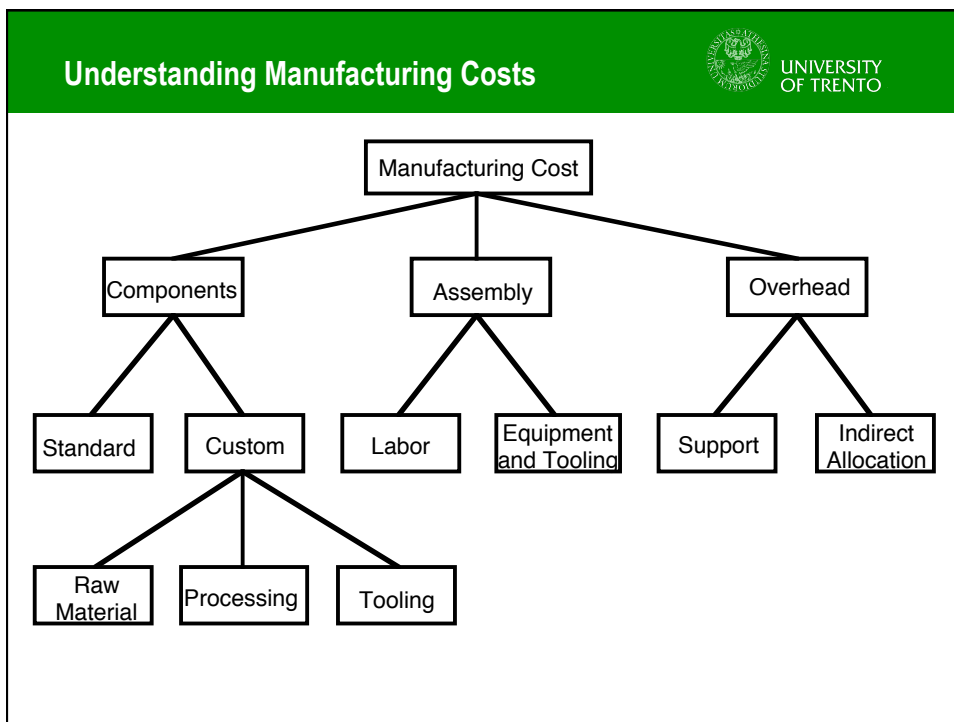

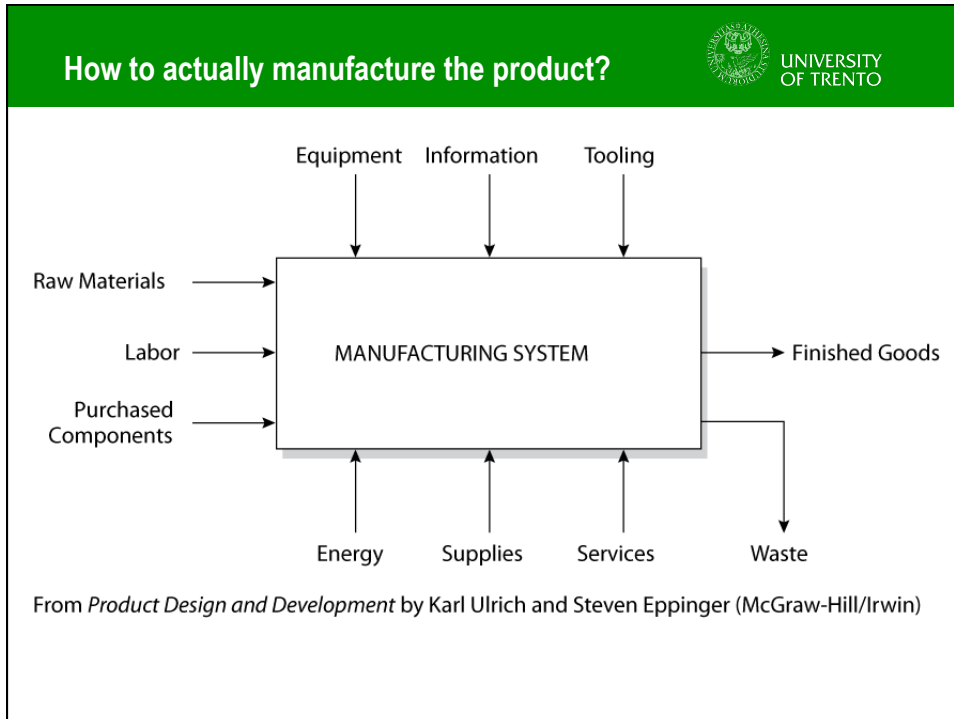

from Product Design and Development by Karl Ulrich and Steven Eppinger (McGraw-Hill/Irwin)

UNIVERSITY OF TRENTO

Planning a Modular Product Line: Commonality Table

Chunks	Number of Types	Family	Student	SOHO (small office, home office)
Print cartridge	2	"Manet" Cartridge	"Picasso" Cartridge	"Picasso" Cartridge
Print Mechanism	2	"Aurora" Series	Narrow "Aurora" series	"Aurora" series
Paper tray	2	Front-in Front-out	Front-in Front-out	Tall Front-in Front-out
Logic board	2	"Next gen" board with parallel port	"Next gen" board	"Next gen" board
Enclosure	3	Home style	Youth style	"Soft office" style
Driver software	5	Version A-PC Version A-Mac	Version B-PC Version B-Mac	Version C

- **Differentiation versus Commonality**
- **Trade off product variety and production complexity**

Is optimizing manufacturing worth?

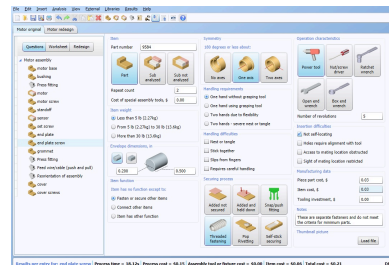

- 2 billion worldwide annual volume
- 7 major producers of 1/2" cassette shells
- JVC licenses the VHS standard
 - dimensions, interfaces, light path, etc
- VHS cassette shells cost ~\$0.25 each
- What is a \$0.01 cost reduction worth?

Design for manufacturing

- Product development practice emphasizing manufacturing issues.
- Successful DFM results in lower production cost without sacrificing product quality.
- Obtained through
 - Cross-Functional Teams
 - Specialized Design Rules
 - CAD Tools
 - E.g. Boothroyd-Dewhurst DFMA
 - <http://www.dfma.com>

Example DFA guidelines from a computer manufacturer.

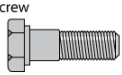

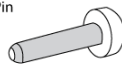

- Minimize parts count.
- Encourage modular assembly.
- Stack assemblies.
- Eliminate adjustments.
- Eliminate cables.
- Use self-fastening parts.
- Use self-locating parts.
- Eliminate reorientation.
- Facilitate parts handling.
- Specify standard parts.

Example of times for fastening parts

- Different tools for fastening parts differs in
 - Time to fasten
 - Time to unfasten (if at all)
 - Precision
 - Robustness to tear and wear
 - Ability to adjust

Component	Time (Seconds)		
	Min	Max	Avg
Screw 	7.5	13.1	10.3
Snap-fit 	3.5	8.0	5.9

Component	Time (Seconds)		
	Min	Max	Avg
Pin 	3.1	10.1	6.6
Spring 	2.6	14.0	8.3

From *Product Design and Development* by Karl Ulrich and Steven Eppinger (McGraw-Hill/Irwin)

10/04/18 Fabio Massacci - ICT Innovation ▶ 30

Design for Assembly

- **Key ideas of DFA:**
 - Minimize parts count
 - Maximize the ease of handling parts
 - Maximize the ease of inserting parts
- **Benefits of DFA**
 - Lower labor costs
 - Other indirect benefits

$$\text{DFA index} = \frac{(\text{Theoretical minimum number of parts}) \cdot (3 \text{ seconds})}{\text{Estimated total assembly time}}$$

From *Product Design and Development* by Karl Ulrich and Steven Eppinger (McGraw-Hill/Irwin)

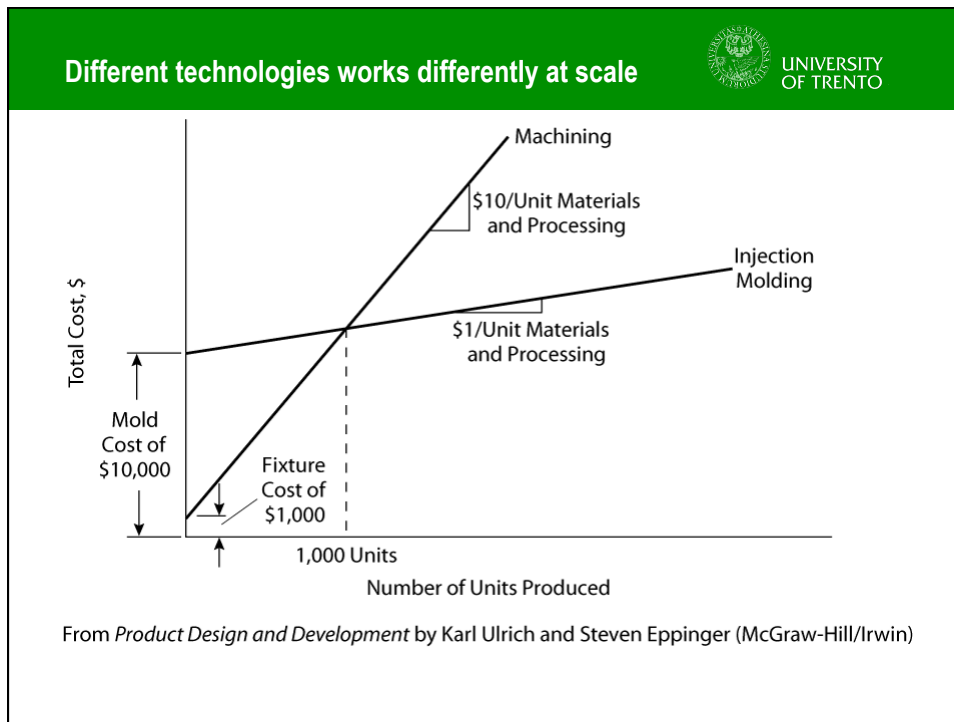

Method for Part Integration

- **Ask of each part in a candidate design:**
 - Does the part need to move relative to the rest of the device?
 - Does it need to be of a different material because of fundamental physical properties?
 - Does it need to be separated from the rest of the device to allow for assembly, access, or repair?
- **If not, combine the part with another part in the device.**

$$\text{Total unit cost} = \frac{\text{Setup costs} + \text{Tooling costs}}{\text{Volume}} + \text{Variable costs}$$

From *Product Design and Development* by Karl Ulrich and Steven Eppinger (McGraw-Hill/Irwin)

Practical Concerns

- **Planning is essential to achieve the desired variety and product change capability.**
- **Coordination is difficult, particularly across teams, companies, or great distances.**
- **Special attention must be paid to handle complex interactions between chunks (system engineering methods).**

Product Architecture: Conclusions

- **Architecture choices define the sub-systems and modules of the product platform or family.**
- **Architecture determines:**
 - ease of production variety
 - feasibility of customer modification
 - system-level production costs
- **Key Concepts:**
 - modular vs. integral architecture
 - clustering into chunks
 - planning product families

Textbook

Product Design and Development
Karl T. Ulrich and Steven D. Eppinger
5th edition, Irwin McGraw-Hill, 2012

1. Introduction
2. Development Processes and Organizations
3. Opportunity Identification
4. Product Planning
5. Identifying Customer Needs
6. Product Specifications
7. Concept Generation
8. Concept Selection
9. Concept Testing
- 10. Product Architecture**
11. Industrial Design
12. Design for Environment
- 13. Design for Manufacturing**
14. Prototyping
15. Robust Design
16. Patents and Intellectual Property
17. Product Development Economics
18. Managing Projects
